

FNP Sales Executive Summary

1. Project Overview

The Sales dashboard is an interactive business intelligence solution developed to analyze sales performance, customer purchasing behaviour, product performance, seasonal demand, and geographical sales distribution. The dashboard enables management and stakeholders to monitor key business metrics in real time and make data-driven decisions to improve revenue generation and operational efficiency.

The dashboard consolidates sales data into a single visual interface, providing insights into revenue trends, order patterns, customer spending habits, product performance, and city-wise demand. Users can dynamically filter data using Order Date, Delivery Date, and Occasion filters for detailed analysis.

2. Business Objective

The primary objective of this project is to:

- Track overall sales performance.
 - Identify high-performing products and categories.
 - Analyze customer purchasing trends.
 - Understand seasonal and occasion-based sales patterns.
 - Evaluate order fulfillment efficiency.
 - Discover geographical regions contributing the most orders.
 - Support strategic decision-making through data visualization.
-

3. Key Performance Indicators (KPIs)

a) Total Orders

Represents the total number of orders placed during the selected period, indicating overall customer demand.

b) Total Revenue

Shows the total revenue generated from all completed sales.

c) Average Order-to-Delivery Time

Measures the average time taken to deliver an order, reflecting operational efficiency.

d) Average Customer Spend

Indicates the average amount spent per customer order.

4. Dashboard Insights

i. Revenue by Occasion

- Anniversary generated the highest revenue.
- Raksha Bandhan and Holi also performed well.
- Opportunity to improve sales during lower-performing occasions.

ii. Revenue by Category

- Sweets contributed the highest revenue.
- Raksha Bandhan gifts and Plants performed strongly.

- Colors generated the lowest revenue.
 - iii. Revenue by Order Time
 - Sales were highest during afternoon and evening hours.
 - Peak hours present opportunities for targeted promotions.
 - i. Revenue by Month
 - Revenue increased during the second half of the year.
 - September and November recorded the highest sales.
 - ii. Top 5 Products
 - Dignissimos Pack generated the highest revenue.
 - Provident Pack and Delectus Gift were also top performers.
 - iii. Top 10 Cities by Orders
 - Dhanbad recorded the highest number of orders.
 - Several other cities showed consistent customer demand.
-

5. Interactive Features

The dashboard includes interactive filters for:

- Order Date
- Delivery Date
- Occasion

These slicers allow users to analyze sales dynamically across different time periods and events.

6. Tools & Technologies

- Microsoft Excel
 - Pivot Tables & Pivot Charts
 - Slicers
 - KPI Cards
 - Data Cleaning
 - Dashboard Design
 - Business Intelligence
-

7. Conclusion

The Sales Analysis Dashboard provides a clear view of business performance through interactive visualizations and KPIs. It helps identify sales trends, top-performing products, seasonal demand, and customer purchasing patterns, enabling better business decisions through data-driven insights.
